

A BASIC OVERVIEW OF ZEHITECH

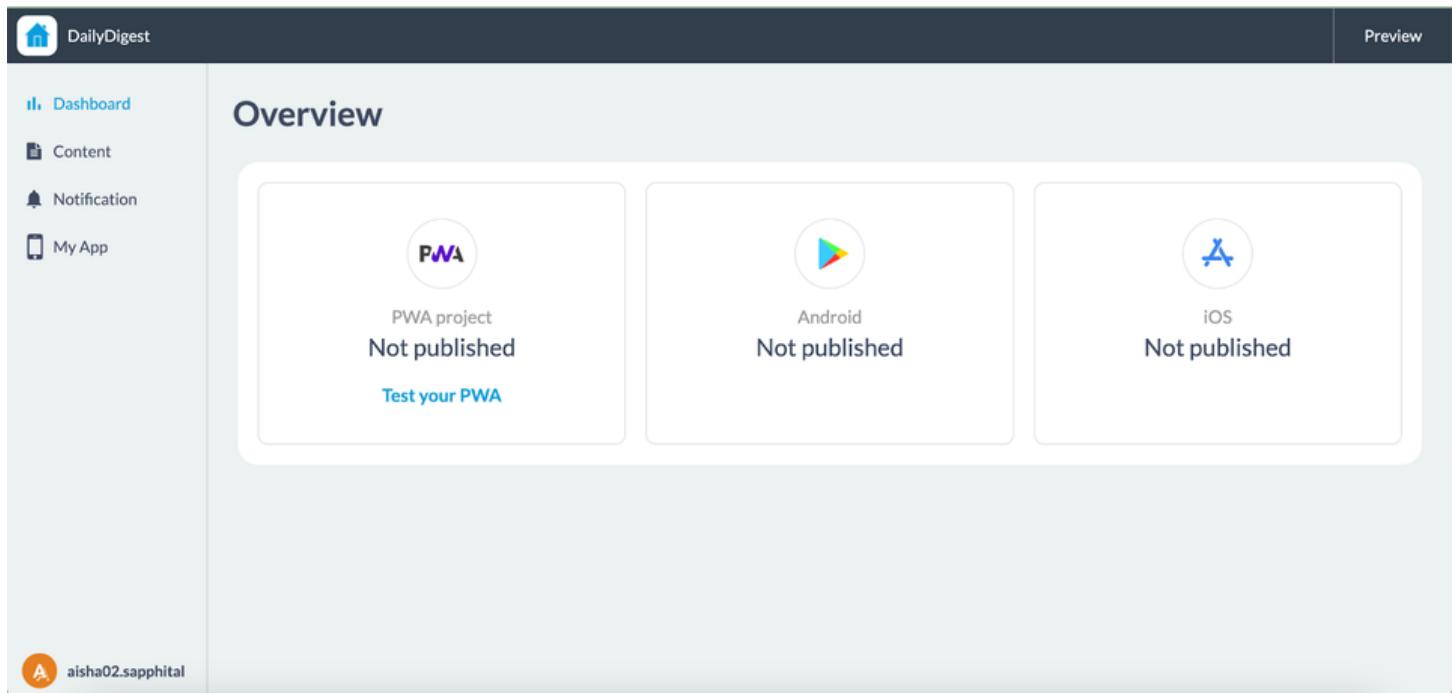

The App Builder

Hello there, welcome to one of the most user-friendly and powerful no-code app builders available. In this ebook, you will receive step-by-step guidance on how to effortlessly create your own app. Let's get started!

This is the overview of the app.

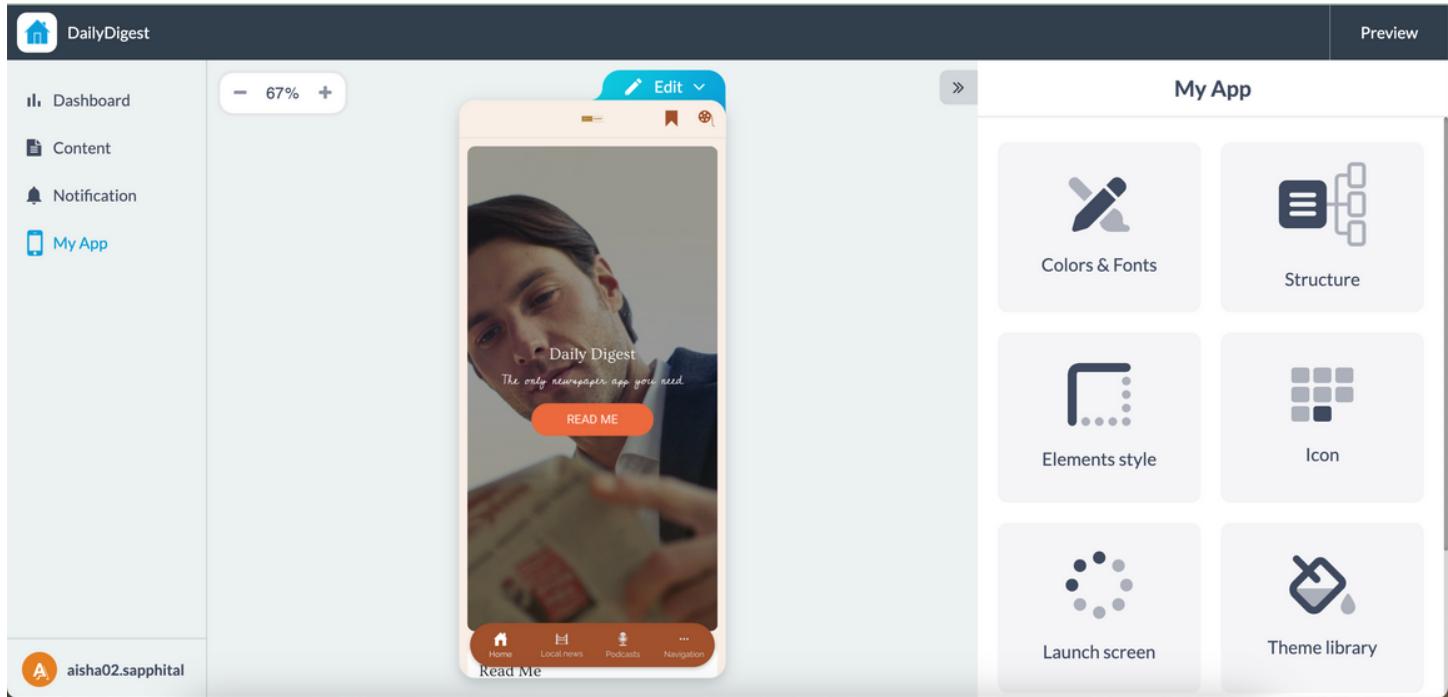

The screenshot shows the 'Overview' section of the DailyDigest app. On the left is a sidebar with icons for Dashboard, Content, Notification, and My App. The main area has a header 'Overview'. Below it are three cards:

- PWA**: PWA project, Not published. Includes a 'Test your PWA' button.
- Android**: Android project, Not published.
- iOS**: iOS project, Not published.

At the bottom left is a user profile icon for 'aisha02.sapphital'.

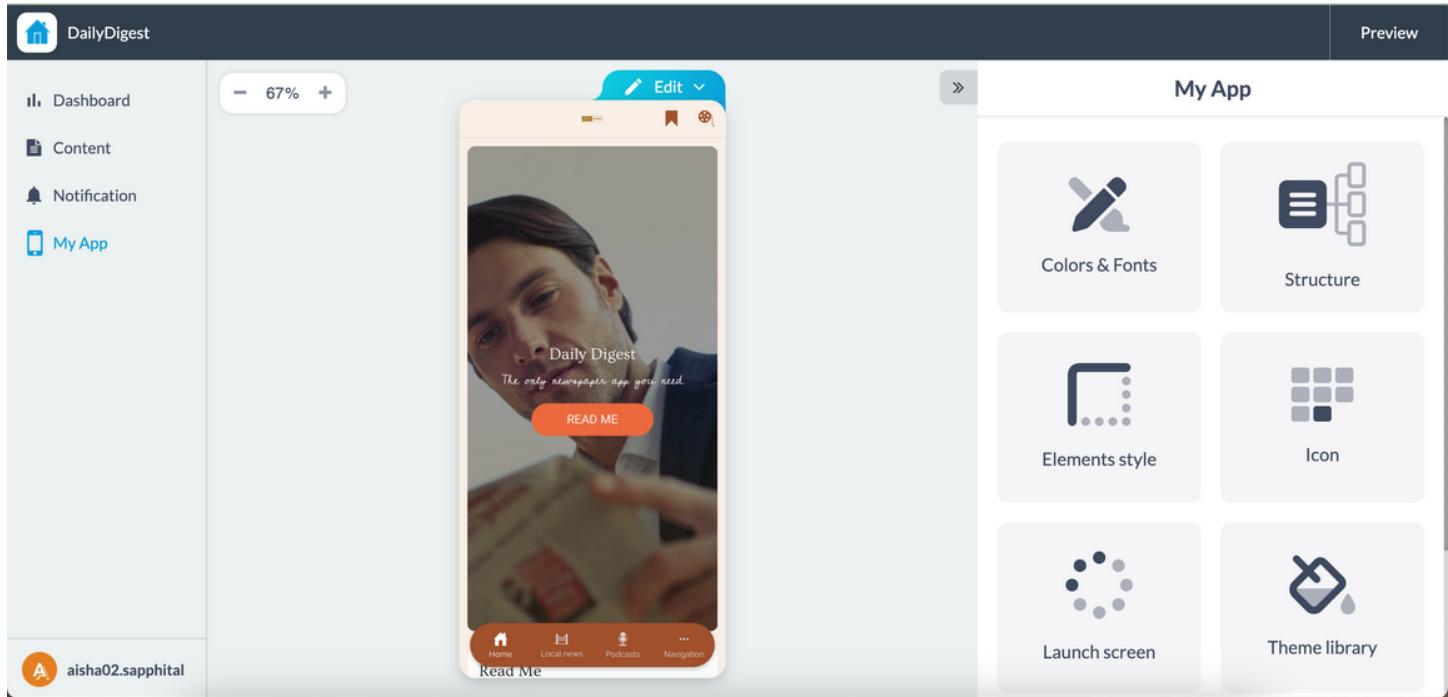

App interface.

The app overview presents several key features accessible on the right-hand side:

- 1. Customization Options:** Adjust the colors and fonts of your app effortlessly.
- 2. App Structure:** Gain a comprehensive view of the overall layout and arrangement.
- 3. Element Styling:** Tailor the appearance of individual elements within your app.
- 4. Launch Screen:** Set the initial screen users encounter upon downloading the app.
- 5. Theme Library:** Access a repository to seamlessly switch themes for your app.

App interface.

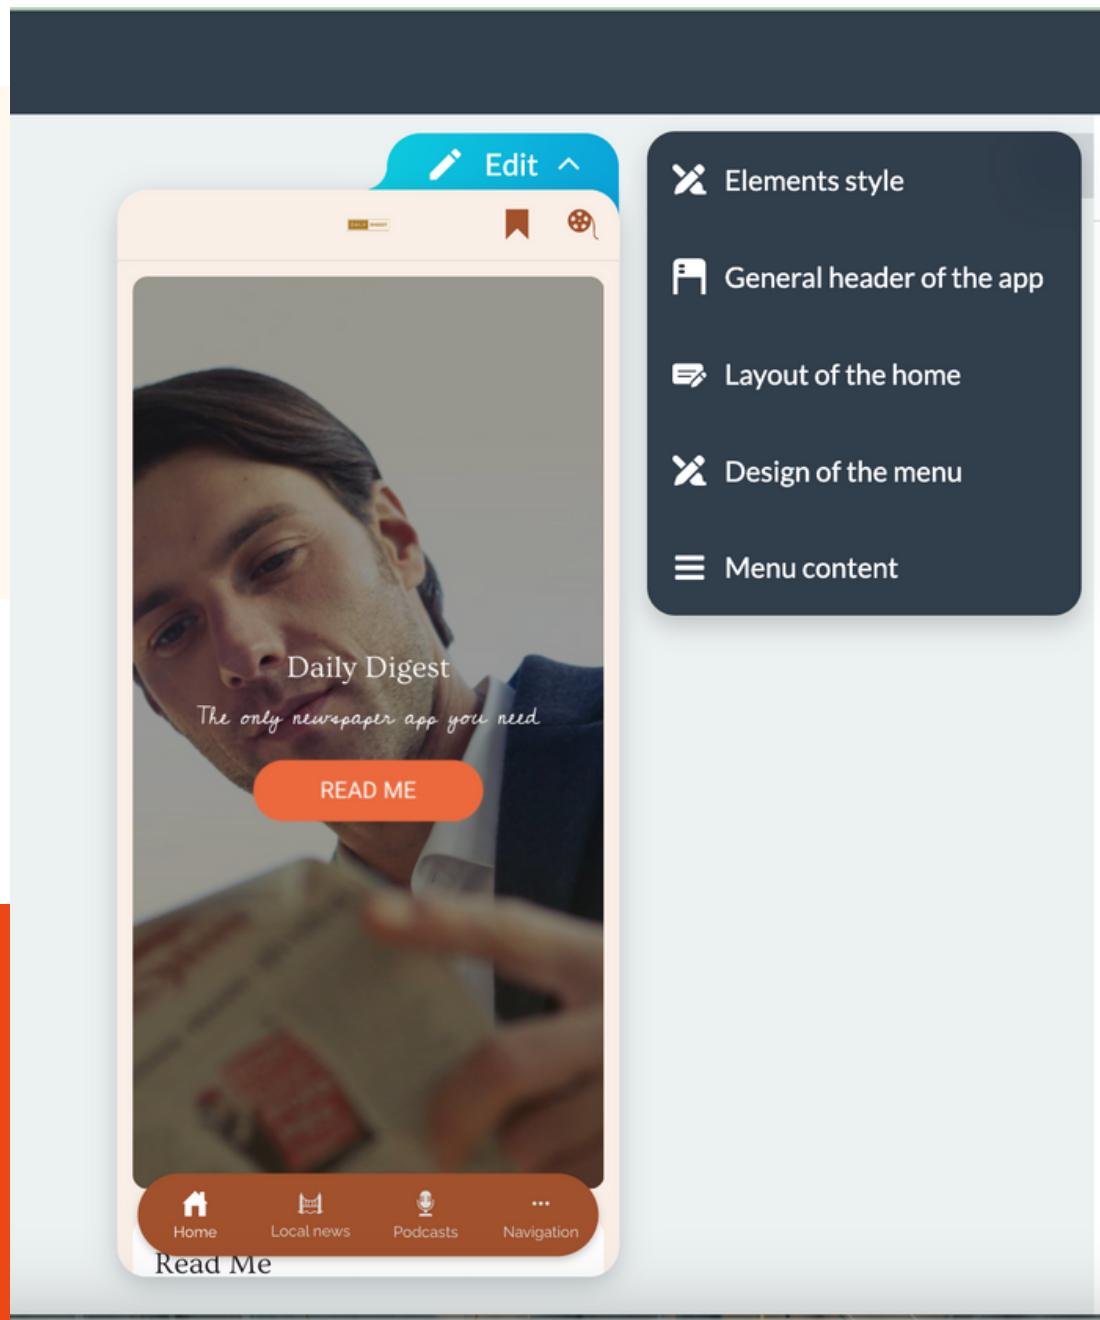

The app overview presents several key features accessible on the right-hand side:

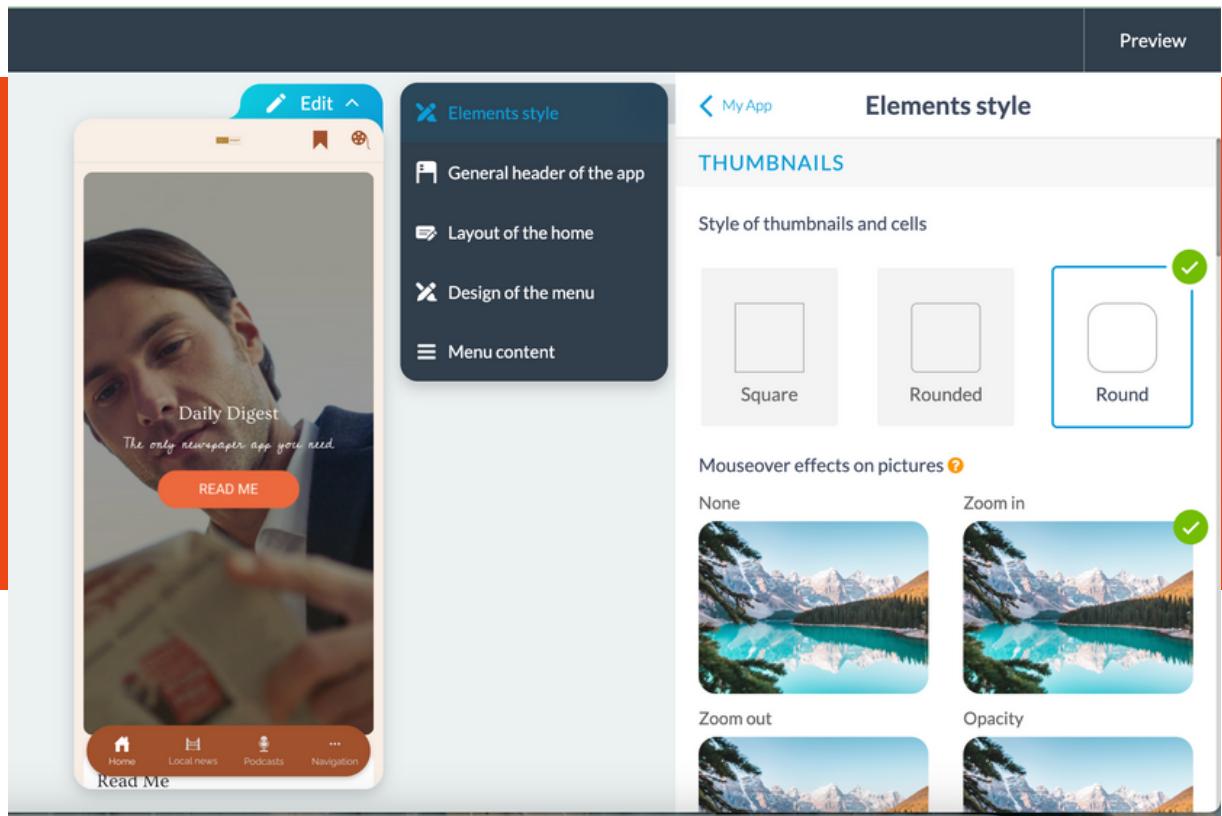

Transitioning to the main app interface, you'll find the edit button located prominently at the top. This feature serves as the hub for all app modifications, including content updates, image additions, and various other adjustments. Below this interface lies the comprehensive view of the app's content and layout.

Main App

Transitioning to the main app interface, you'll find the edit button located prominently at the top. This feature serves as the hub for all app modifications, including content updates, image additions, and various other adjustments. Below this interface lies the comprehensive view of the app's content and layout.

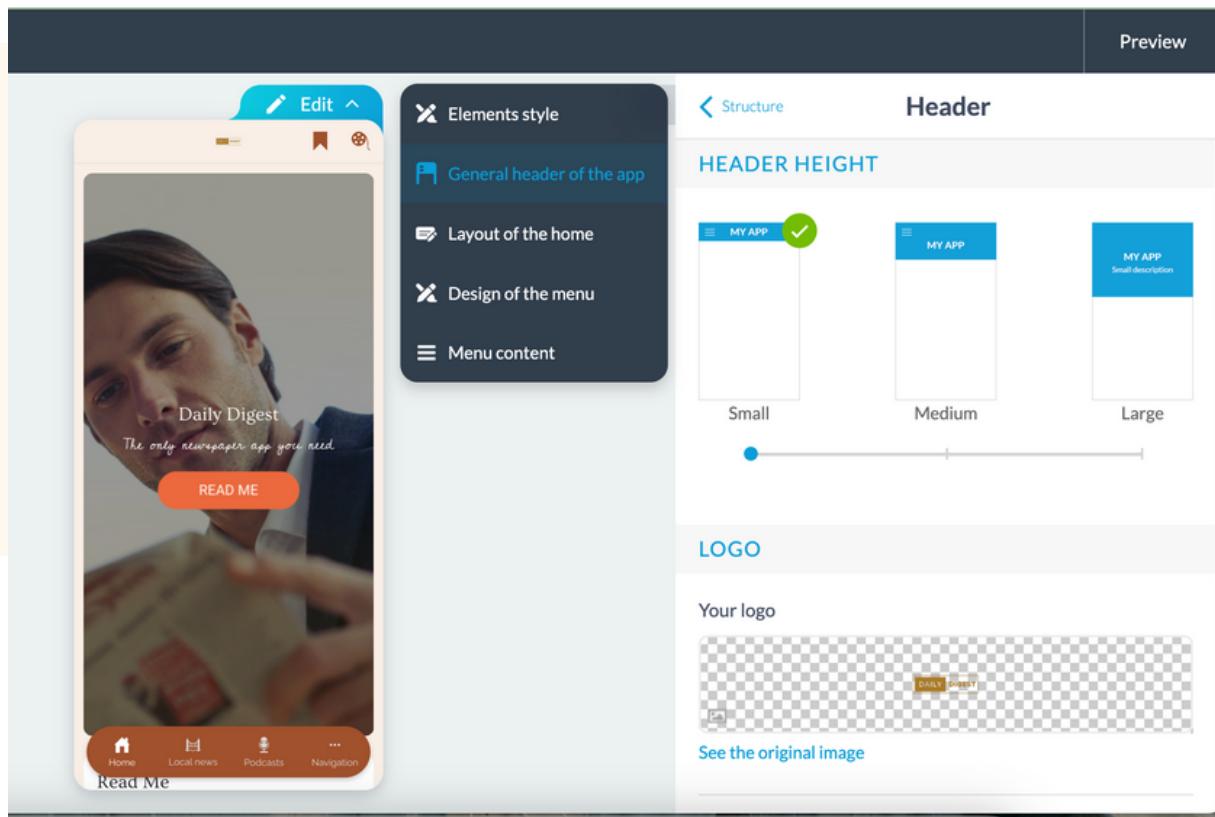

Elements Style

The style elements are displayed in the right corner, as you can observe. Here, you have the freedom to adjust styles according to your preferences. Feel free to explore and customize as you see fit.

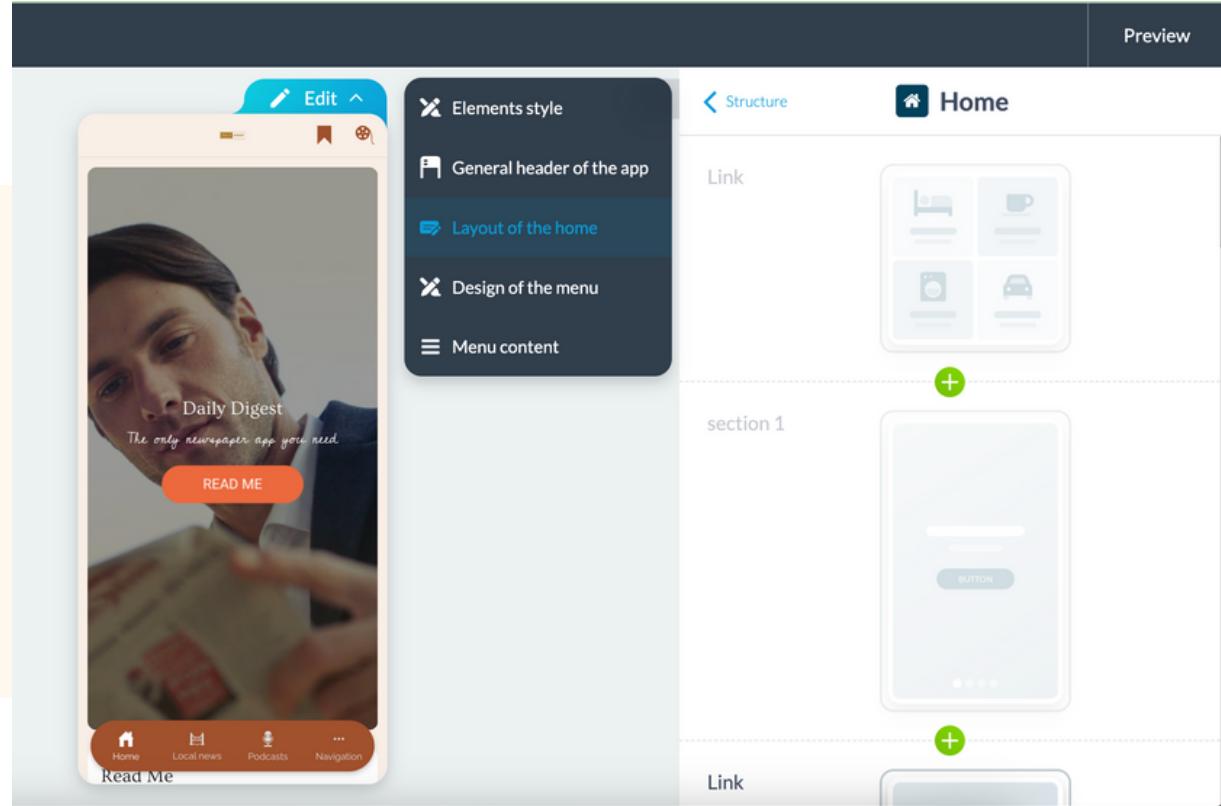

General Header of the App

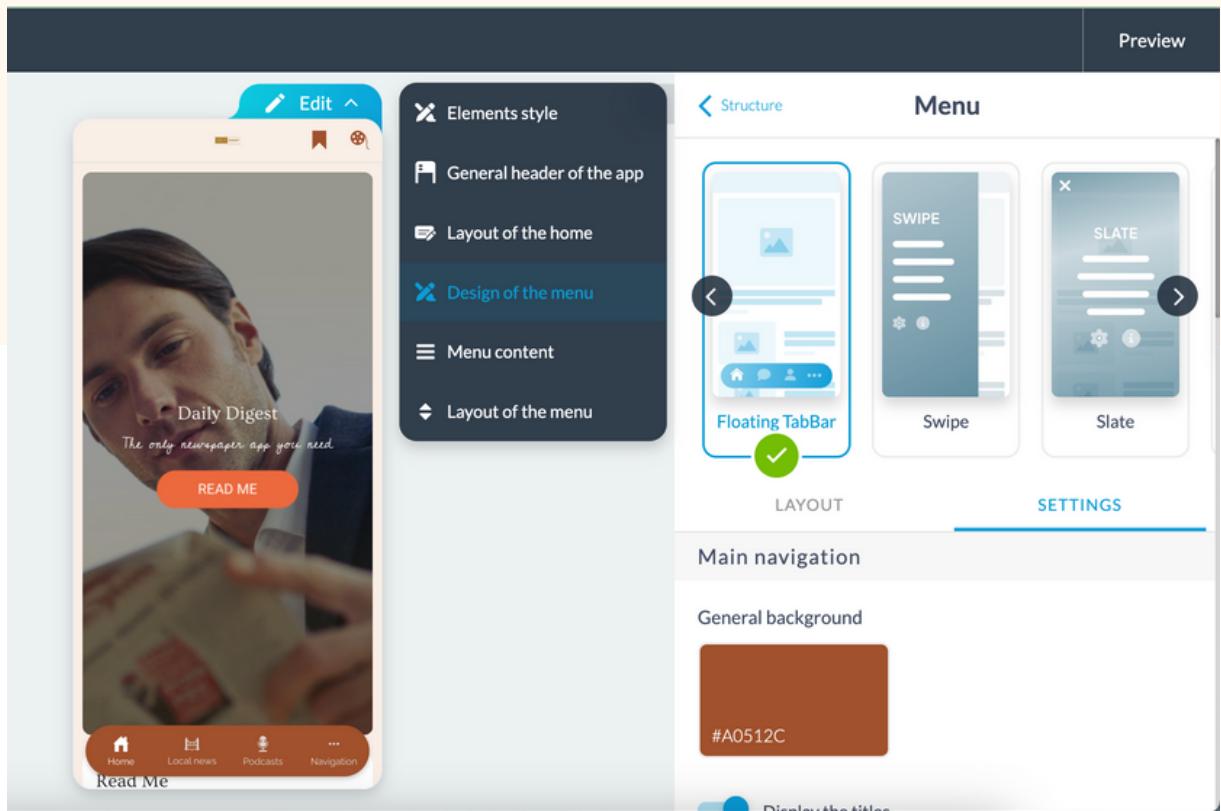

For the "general header of the app," you have the flexibility to change the header style to your liking. Additionally, you can expand the content as needed and personalize the section by adding or modifying the logo.

Layout of the Home

This is the home tab, where you can curate content for your home page.

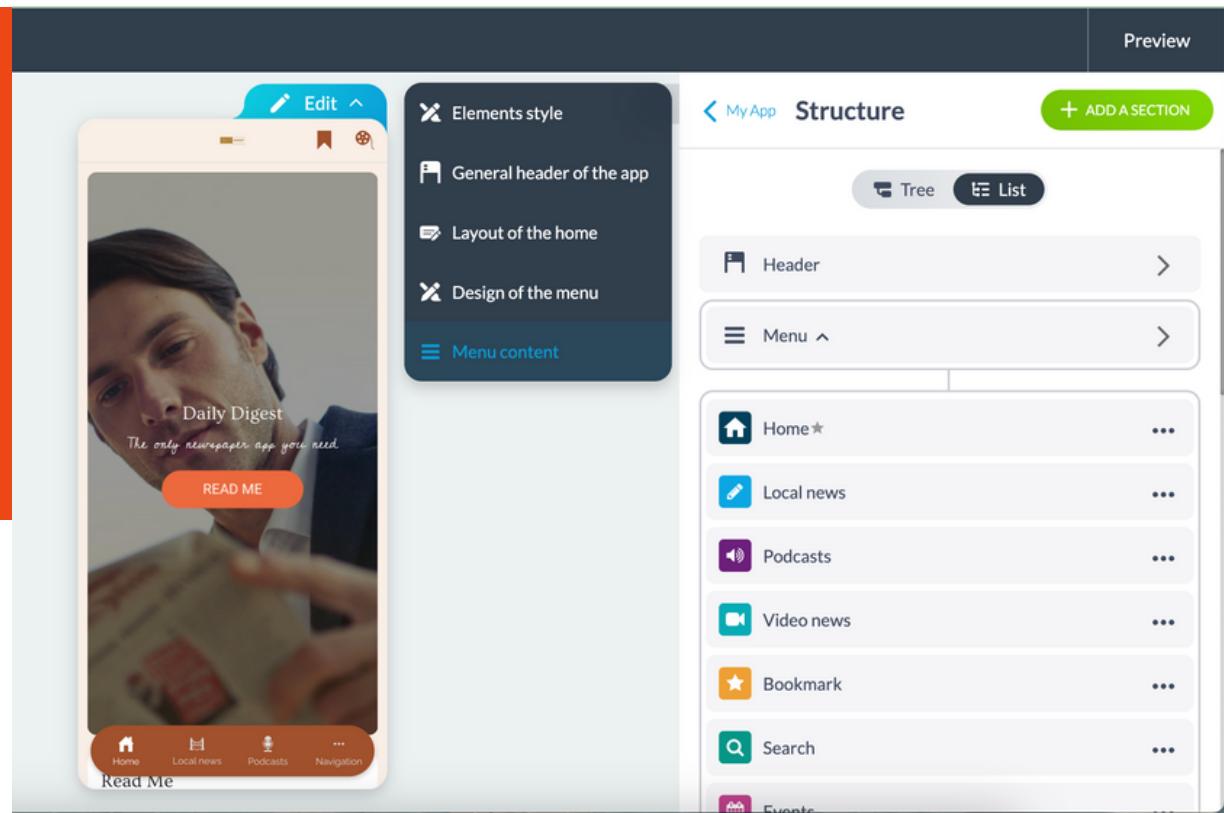

Design of the Menu

This is the menu design. You have the option to customize the menu design, whether you prefer swipe navigation or any other style. Feel free to explore and experiment with different options to find what suits you best.

Menu Content

The screenshot shows a mobile application interface being edited. On the left, there's a preview of the app's home screen featuring a large image of a person's face, a "Daily Digest" section with a "READ ME" button, and a navigation bar with "Home", "Local news", "Podcasts", and "Navigation" buttons. The main area is titled "Structure" and contains a sidebar with "Elements style" options like "General header of the app", "Layout of the home", "Design of the menu", and "Menu content". The "Menu content" option is highlighted. To the right, a list of menu items is shown under "Header" and "Menu":

- Header
 - Home*
 - Local news
 - Podcasts
 - Video news
 - Bookmark
 - Search
 - Events
- Menu
 - Home*
 - Local news
 - Podcasts
 - Video news
 - Bookmark
 - Search
 - Events

The menu content provides comprehensive insights into your mobile app and serves as the hub for managing its various aspects. Additionally, you can enhance its functionality by adding sections such as search, events, and more.

THE END

There you have it! Now, dive into the course to gain a deeper understanding of the mobile app and learn how to build your own. Happy learning!
